uPVC Features

IAQ

Indoor Air Quality (IAQ) can be maintained by avoiding interior energy loss (generally 37% through windows). UMPL Windows Profile Systems reduce energy loss by over 30% thereby reducing energy costs

Excellent Cost Benefit Ratio

uPVC profiles save a lot of costs in terms of maintenance & saving energy when compared to Timber, Teakwood (Sagwan) wood frames which are approximately 40% - 50% more expensive

UV Resistance

UMPL Windows Profile Systems offer 100% UV resistance with the right amount of TiO₂, which helps in retaining whiteness against exposure to the sun.

High Weather Resistance

UMPL Windows Profile Systems are specially developed keeping in mind the harsh weather prevalent in India. Long exposures to sun, rain, wind & moisture cannot affect the window quality or durability.

100% Recyclable

UMPL avoids contributing to deforestation by using wood alternatives. UMPL windows and doors are 100% lead free & recyclable.

Sound Insulation

Not only do they provide thermal insulation but also special sound insulation. Double glass units can help in sound reduction up to 30 Db.

Fire Retardant

UMPL windows are fire retardant. During fire, once source of fire is removed, a carbonaceous layer is formed preventing supplying of oxygen and stops the spread

Termite & Corrosion Resistance

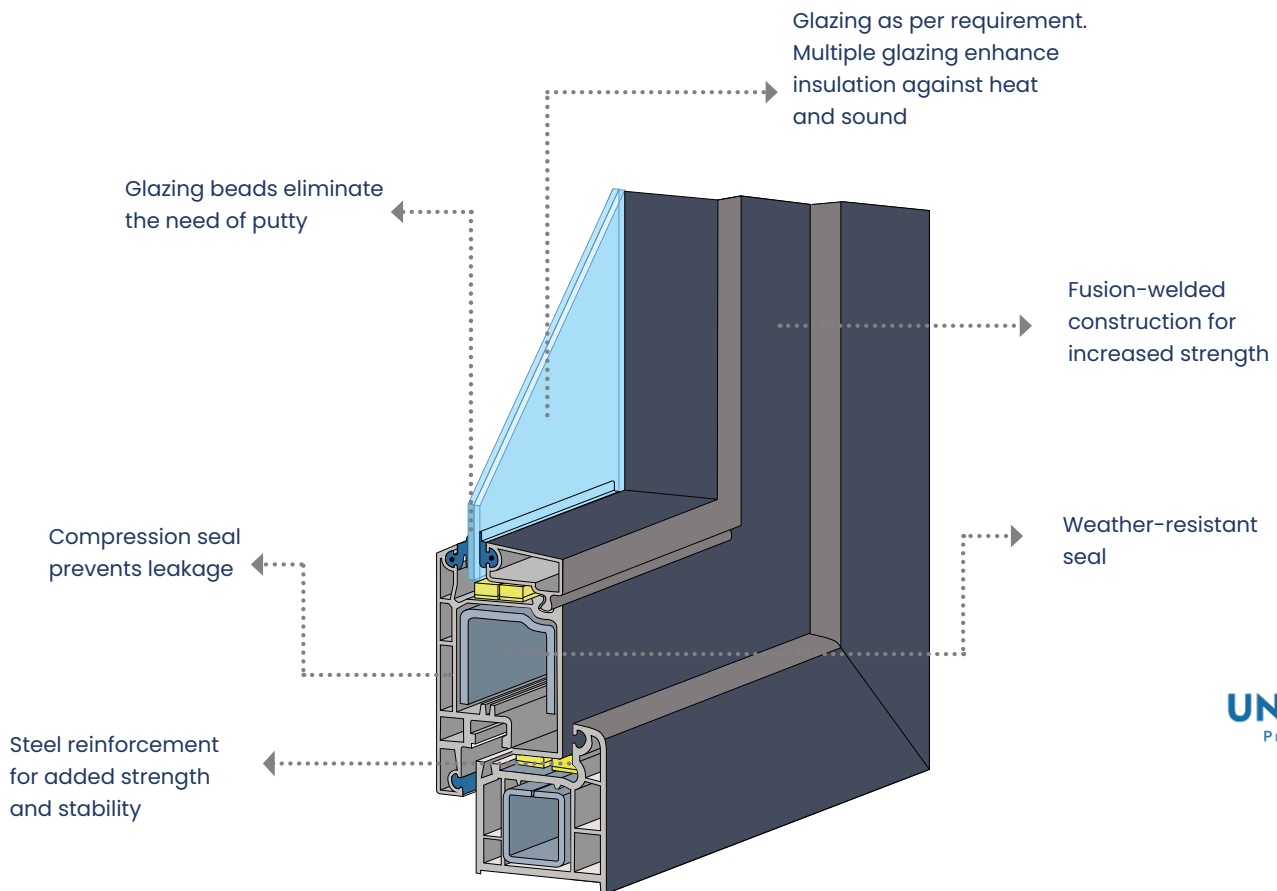

UMPL windows are termite and corrosion resistant. Salts, acids, alkali and waste gases cannot corrode the window systems.

Maintenance Free

UMPL windows are virtually dirt resistant and easy to maintain with normal soap water.

uPVC Mechanism

Give your Windows a personal touch

At UMPL Windows, we offer world-class fittings for enhanced protection and performance of your doors and windows. They are available in a variety of styles – so you can choose what works for you.

- Single and Multipoint Locking
- Handles
